

*If you need a hotel system
and a restaurant system –
get a hotel-and-restaurant system*

Hotelinx Suite

Hotellinx includes room and meeting room reservations, table reservations and bills for hotel, restaurant, bar and other points of sales. It is more than a traditional hotel system linked to a traditional POS.

Why pay for a hotel system and a POS system and make table reservations manually if you can have everything in one? Why pay for the headache of linking two systems together if you don't have to? Why read a hotel sales report and a POS sales report if you can have all sales on one report? With these and many other things, an integrated hotel-and-restaurant system will help you.

Book restaurant tables just like hotel rooms

The graphical view gives you an excellent overview of the situation at any time and allows you to make table reservations with drag-and-drop.

When you make table reservations for your hotel guests, all the guest details are available, and you can also save the details of non-resident restaurant guests in your marketing database.

Restaurant postings for hotel guests can be made directly onto their room bills

Regular non-resident guests, e.g. companies can have their own accounts and for occasional guests you can use table numbers.

Restaurant bills can be combined and shared and postings can be transferred between them.

- Room, meeting room and table reservations for hotel guests and non-resident guests
- A guest's room, meeting room and table reservations are treated as a unit
- Room and table reservations on one (e.g. email) confirmation
- Room bills can be settled and check-out made from the restaurant
- Extra bills and sub-folios
- Non-residents' accounts
- Invoicing of non-residents
- Hotel and restaurant invoices in one common or two separate City Ledgers
- User rights can be set differently for hotel and restaurant employees
- Transfer restaurant bill to frequent guest account
- Transfer between, combine, share restaurant bills
- Transfer postings between two points of sales (restaurant, bar, hotel, ...)
- Kitchen printer is defined per product
- The same printer can be used as receipt and kitchen printer
- The same receipt printer can be shared by several workstations
- Sales report showing sales per product
- Hotel, restaurant, bar sales on one report
- Interfaces to third party stock control
- CRM with mailshots, emailshots, statistics, ... for hotel and restaurant guest
