

Hotellinx Mobile

- the pocket-sized hotel & restaurant tool

Grab every chance to sell without being tied up at your desk...

Be efficient and move around attending to other things while waiting for guests to call and book – with your workstation in your pocket, you are always ready to make confirmed reservations and there is no need to keep guests waiting while you run back to a desk to check availability.

Improve guest service and make it more flexible without large investments ...

Additional sales to in-house guests – extra nights, restaurant tables, activities, meeting rooms can all be booked on the move and at the same time confirmed by sms and charged directly to the room bill.

Meet guests anywhere in the lobby or even outside and check them in or out on the spot.

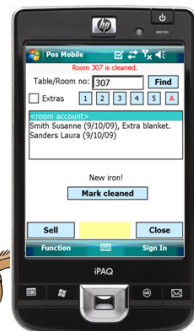

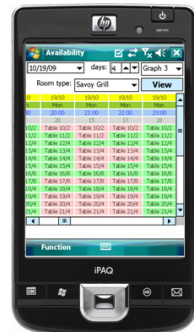

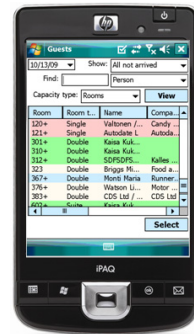

Speed up work and sell more in restaurants, bars and spas, in the conference area, on the terrace, at outdoor functions, ...

Running back to a desk between every order to have them added to your system and sent to the kitchen is a waste of time when it can all be done directly at the table, while talking to the guest. Or while moving around in the conference area. Fewer people can sell as much as before – or the same number of people can sell more ...

Efficient house-keeping and maintenance instead of unproductive walking back and forth ...

Give house-keeping access to the real-time situation regarding check-ins and -outs and let them plan their own work according to that. Let them mark rooms cleaned and let them add minibar charges directly to the room bill the minute they see what has been consumed.

Instead of spending valuable time on chasing maintenance staff to tell them where a light bulb needs to be changed or a television set doesn't work, give them a pocket workstation and let them find out themselves and report when the work is done.

Hotellinx Mobile is a hotel & restaurant system in miniature, which works on devices with Windows Mobile 6.0 or later and screen resolution 640X480. For more information, please contact Hotellinx Systems Ltd or check out www.hotellinx.com.
